### The Santa Kapoula

**Russia informed the United Nations and the West that any explosion “dirty bomb” in Ukraine will be regarded as a “nuclear terrorism” and therefore will be activated, the Russian defense doctrine of nuclear deterrence.**

In simple words, the Russian President B.Putin and his government will consider **the use of “dirty bombs” against the Russian forces in Ukraine as a nuclear first strike against the Russian Federation.**

In this context, the **ambassador of Moscow to the United Nations sent a letter to the UN Secretary-General Antonio Γκουτέρες and the UN Security Council.**

This information which causes it to literally shock trafficked in the last few hours from Russian sources. Unfortunately, however, has no basis. Any explosion reinforced dirty bomb with the aim of Russian forces will be considered as a nuclear first strike against the Russian forces and bring the region closer to the brink of the abyss.

There are three other worrying developments that show that maybe we're on the 5 nuclear disaster:

1. Russia raised last night, the forces παριστοχημικού war to the utmost readiness.
2. The Russian Army launches its annual nuclear exercise "GROM". If this exercise is done every year, however the time it will take place is unnatural. The exercise is conducted Spring, not autumn, and certainly not now. Therefore, Russia moved nuclear exercise. In fact issued NOTAMS for launches ICBM from Plesetsk and SLBM from the Coast of the Peninsula of Kola in the range Kura. The exercise starts tomorrow until 29 October.
3. U.S. Officials confirmed for the first time that "**there are new, alarming developments related to the nuclear arsenal of Russia**". The statement was made a few hours ago.

## Letter to Russia in the UN

Appeal to the UN to do what he can to prevent the Ukraine to use a "dirty" bomb in the battlefield address Russia, which still insists that Kiev intends to move forward in this challenging action in order to accuse Moscow that makes use of weapons of mass destruction.

Moscow sent a letter with details about their claims to Kiev at the United Nations late Monday and diplomats said that Russia plans to raise the matter at the closed meeting with the Security Council on Tuesday.

**"We will consider the use of dirty bombs by the regime in Kiev as an act of nuclear terrorism"**, said the Ambassador of Russia to the UN Vasily Nebenzya to the UN Secretary-General Antonio Guterres and the Security Council in a letter, seen by Reuters.

**"We call on the c.c. of the United Nations to do everything in his power to prevent this heinous crime."**

As transmits the Russian news agency TASS, the ministry of Defense of Russia had information that **"this challenge can be carried out with the support and western states"**.

**"Russia is urging western countries to exert their influence in the regime of Kiev in order to abandon the dangerous designs of which threaten international peace and security,"** he said Nebenzya.

In this context, the Nebenzya notes that **"in the midst of the campaign honed anti-Russian propaganda, we'd like to emphasize that the Russian Federation does not intend, nor intends to use nuclear weapons in Ukraine"**.

However, the Russian forces have been put on alert for all eventualities.

Meanwhile, the head of the troops nuclear, biological and chemical protection of Russia,

lieutenant-general Igor Kirilov, at a briefing the media said that the Russian forces "***are prepared to work under radioactive contamination***".

The Russian Defense ministry said that the aim of an attack "dirty bomb" from the Ukraine was to blame Moscow for the resulting radioactive contamination, for which Russia had begun to be prepared.

The monitoring service of nuclear power, the UN said it was preparing to send inspectors in two unknown sites of Ukraine at the request of Kiev, and the two are already subject to inspections, in apparent response to the claim of Russia for a "dirty bomb". Read more

The Russian state news agency RIA spotted what he said were the two sites involved in the business – the east factory and the enrichment of minerals in the central area of the Ντιπροπετρόβσκ and the Institute of Nuclear Research in Kiev.

### **"There are worrying developments with the Russian nuclear arsenal"**

A senior American official said that there are new, alarming developments related to the nuclear arsenal of Russia. The official asked to remain under anonymity and declined to give details, given the sensitivity of the matter.

*"The sudden frequency of phone calls and the resulting warnings reflect what American officials said was a greater level of concern for potential use of nuclear weapons by Russia than at any point during the war".*

*"The conversation [Σόιγκου] was intended to delimit the red lines that could potentially cause Russia to launch a nuclear attack on Ukraine and to clarify the government Biden because mr. Putin raised the prospect of a nuclear strike in Ukraine,"* said the three officials.

This statement was made to a large american MEDIA and later disappeared...

Recall that yesterday, after the barrage of contacts of the Russian minister of Defence, Ρ.Σοιγκού, the baton took the Russian ΑΓΕΕΘΑ, B.Gerasimov, who spoke with his counterparts in Britain, USA, France, the three nuclear powers of NATO.

However, in a joint statement, the Foreign ministers of France, Britain and the United States stated that all rejected the claims and confirmed their support for Ukraine against Russia.

*"Our countries have made it clear that we all reject them transparently false claims of Russia that Ukraine [prepared] to use a dirty bomb in its territory",* they reported.

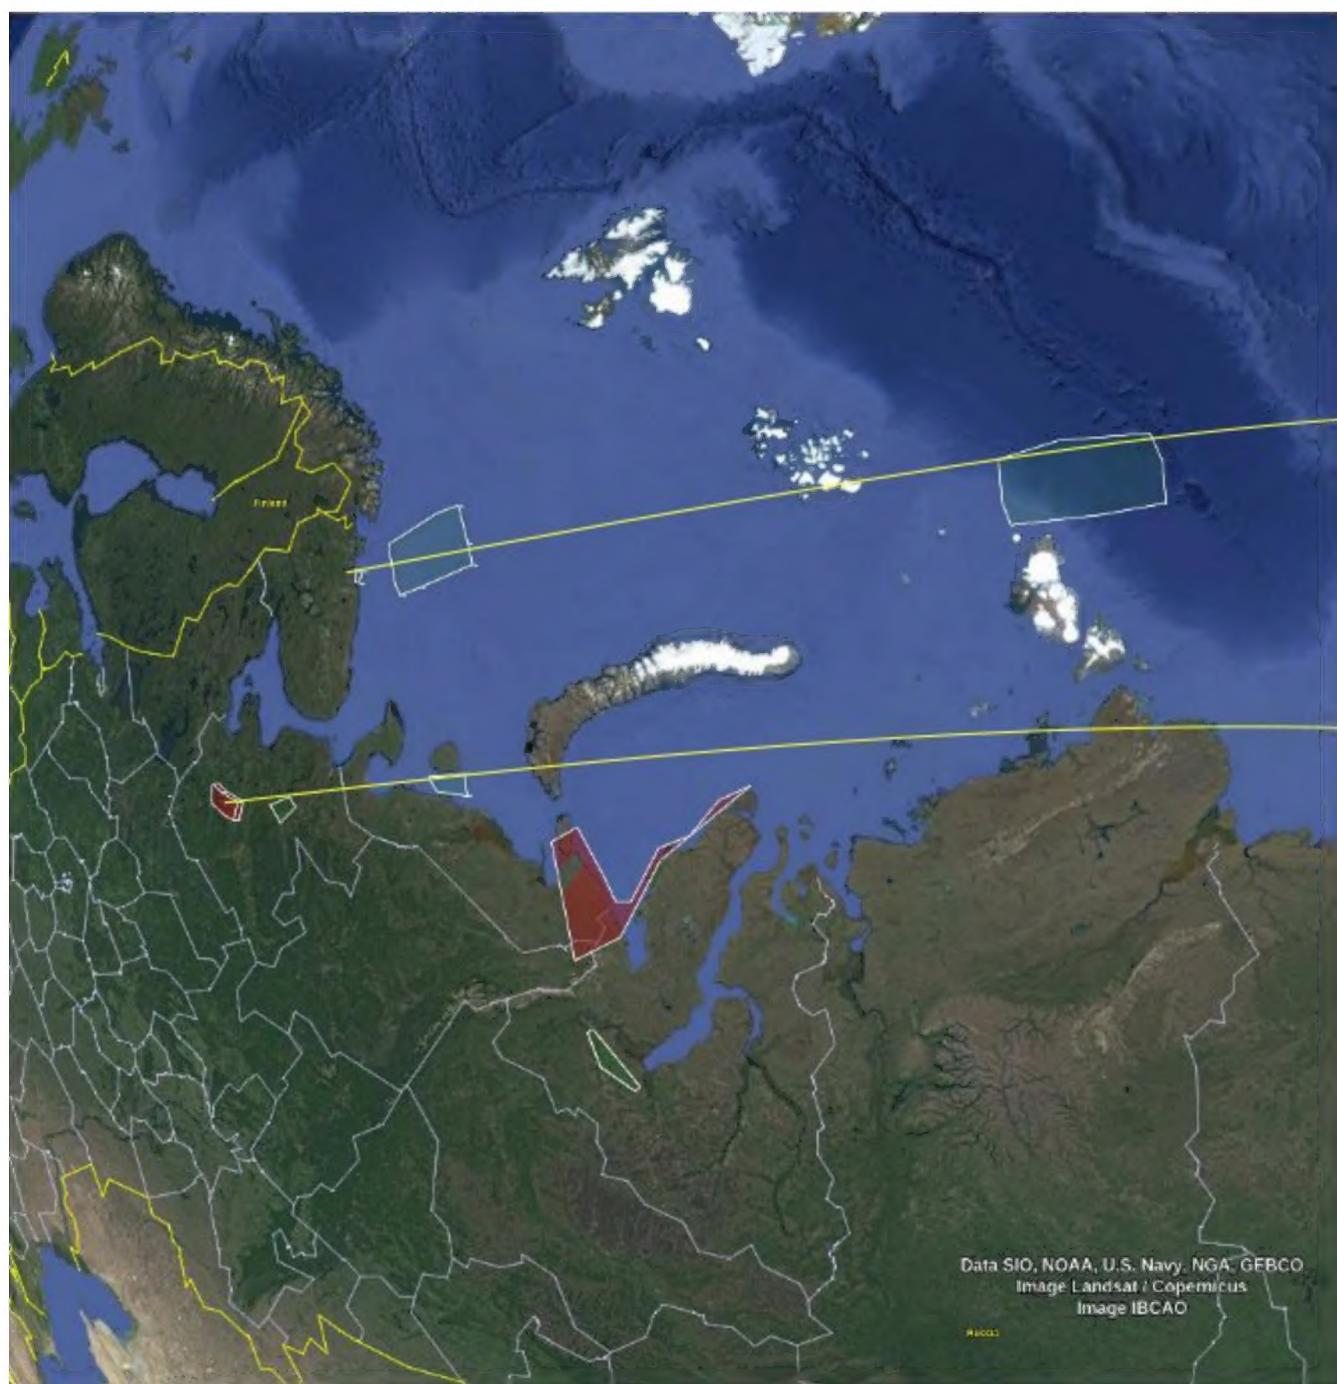

*"People will see any attempt to use this claim as a pretext for escalation".*

*"There will be consequences for Russia either use a dirty bomb or a nuclear bomb",* said the representative of the State Department spokesman Ned Price.

🇺🇸 🇺🇦 🇷🇺 🌐 There would be consequences for Russia if it uses a so-called “dirty bomb” or any other nuclear weapon, U.S. State Department spokesperson Ned Price said on Monday [pic.twitter.com/5NlzdPkcSA](https://pic.twitter.com/5NlzdPkcSA)
